

3,3'-methylene-bis[5-methyl]-oxazolidine (MBO)

3,3'-methylene-bis[5-methyl]-oxazolidine (MBO) is an important hydrogen sulfide scavenger used in the treatment of sour oil and gas. Conventional testing involves expensive, complicated laboratory methods that can take weeks to complete. With our simple, easy-to-use system for rapid analyte detection, it is possible to perform on-site, laboratory-grade testing for MBO in fresh and spent scavenger solutions. The reduction in testing time from weeks to minutes enables better decision making on when to replace scavenger solutions, improving scavenger system performance while reducing material and labor costs.

Benefits

- Minimal training needed
- Minutes per test with milliliters of sample
- Directly measure scavenger solutions without extensive sample preparation

Specifications

- Accuracy:** ± 2 -wt%
- Range:** 10- to 100-wt%
- Count:** 10 tests per box

Ordering Information

Product

MBO Analysis Kits (PCT)

Part Number

OV-□P-B050-PCT
