

# OPAL-104 Amine Analysis System

The OndaVia OPAL-104 Amine Analysis System is a portable, easy-to-use chemical analysis tool designed for the quantitative analysis of ppm-level amines. A thirty-second test provides the amine concentration in a 1-10-ppm (LPM) or 5-100-ppm range (PPM). The base system includes the ability to quantify a single amine; software upgrades enable additional capabilities, including multiple ranges or additional amines. The OPAL-104 Amine Analysis System provides the benefit of laboratory-grade capabilities without the need for expensive, complex instruments and technical expertise.

## Benefits

**Portable:** on-site testing for rapid response

**Easy-to-use:** designed for in-field operation

**Versatile:** upgrade options enable quantification of up to nine amines over two measurement ranges

## Specifications

**Power:** 5-V, 2-A DC

**Physical:** 7 x 5 x 3 inch footprint, 2 lbs

**Software:** Windows® 10-based

## Ordering Information

### Product

Amine Analysis System

Dual Range

Refinery Amine Package (MEA, MMA, DMEA)

Amine Unit Package (MDEA, DEA, MOPA)

Boiler Water Package (CHA, DEAE, morpholine)

### Part Number

OV-PP-J021-PPM or -LPM

OV-PP-J021-01

OV-PP-J021-02

OV-PP-J021-03

OV-PP-J021-04
